

Meet large-scale demand during the high-growth period with a design that supports improved performance and mass production

Registration No.	Number 00336		
Registration Date	September 13, 2022	Registration Category	Category 1 (multiple identical products such as mass-produced products)

Name (Model, etc.)	No. 600 Automatic Desktop Telephone Set		
Location	Musashino-shi, Tokyo		
	NTT History Center of Technologies		
Owner (Custodian)	NTT Information Network Laboratory Group		
Manufacturer (Company)	—		
Year Manufactured	1962-1979		
Year first appeared	1960		
Reason For Selection	This telephone set met the large-scale demand during the high-growth period. Since the early 1950s, basic research was carried out by Nippon Telegraph and Telephone Public Corporation, and mass production was carried out by multiple companies since around 1963, when Japan truly entered a period of high growth. With reference to the desirable acoustic characteristics of a telephone set that the auditory psychology group for basic research indicated, the telephone set was designed based on basic studies such as a telephone design group designing telephone sets, and they improved performance. It was mass-produced with a design that takes into consideration the parts placement and assembly method, with an eye toward automation on the premise of mass production. It is an important telephone set that supports high performance and meets large-scale demand.		
Registration Standard	1-A (Show an important aspect or stage of the development of science and technology.) 2-A (Played a notable role in improving people's way of life and creating new ways of living.)
