

Registration No.	Number 00057		
Registration Date	October 6, 2010	Registration Category	Category 1

Name (Model, etc.)	Samples of vinyl-chloride-coated wires and cable		
Location	Ichihara City, Chiba Pref		
	FURUKAWA ELECTRIC CO., LTD.		
Owner (Custodian)	FURUKAWA ELECTRIC CO., LTD.		
Manufacturer (Company)	FURUKAWA ELECTRIC CO., LTD.		
Year Manufactured	1950-1955		
Reason For Selection	<p>In 1949, Furukawa Electric Co. started local production of vinyl chloride-coated wires after it bought the country's first vinyl chloride wire &amp; cable extruder from America. Because vinyl chloride has better insulating property than rubber, can easily be made using an extruder, and is very strong, it became widely used as material for coating electric wires. These are product samples of nine types of wires, including 600V wires and telephone wires, which were used to explain usage to customers. They were all made with locally produced vinyl chloride coating. These are valuable samples of the first vinyl chloride coated wires, which have now become widely used for various applications.</p>
