Reason For Selection	<p>Prior to the setting of the international G3 standards, when analog facsimiles were the norm, heat-sensitive recording facsimile technology was applied to digital facsimiles for the first time. A band compression system called SWS (Skipping White Space) increased transmission efficiency, speeding up the transmission time six times faster than the analog system.</p> <p>Furthermore, the implementation of optical reading systems and electronic solid-state scanning made mass production possible, thereby driving down the price.</p>
